Hyper-V connection send CTRL+ALT+DEL
dinsdag 31 januari 2012 09:31

I am a big fan of the software " [Royal TS](#) ". Now I'm using the V2 version, still in beta, on my new windows 7 installation. One thing I could't get to work on my earlier Windows XP installation was the Hyper-V connection, now on my W7 with Royal TS V2 it is working, but after I am connected with the hyper-v console my ctrl+alt+del sequense is not getting through to the hyper-v client but my W7 is capturing this, that is what I expected.

The key sequense is CRTL+ALT+END
